

GAY SLANG DICTIONARY

Gay slang is constantly evolving, with new words being added frequently, and for these reasons, we should never, forget the fabulous terms of today, and of days gone by, in the years of the past.

Disclaimer

Gay slang may be offensive and vulgar. Most of the vocabulary of this Dictionary comes from a adults, Environment such as gay nightclubs, gay bathhouses, and other places where gay and lesbians meet socially. Due to the adult content presented in this dictionary. Note parents are advised this Dictionary contains sexually explicit language, that is not suitable for young children.

I do not apologise for any offence taken from the following dictionary. you have been advised of the sexually explicit, racist, sexist and prejudicial expressions. To omit or censor this language, would limit telling, the whole story, of gay and lesbian history, and that would present a false impression of current and past linguistics.

blue

--a reference to the notion that all homophobia would end if everyone who was gay or bisexual would turn blue (or wear a blue dot on their forehead) for just one day. This idea is discussed in the short story "Am I Blue?" by Bruce Coville , where it is referred to the Third Great Gay Fantasy (Am I Blue? Coming Out from the Silence, ed. Marion Dane Bauer, HarperTrophy , a short story collection for LGB youth), and in Bingo by Rita Ma Brown. Musician Tori Amos also used this reference in the song "Hey Jupiter" on Boys for Pele when she asked, "So are you gay? Are you blue?" (Tori Amos, while straight, is a great friend to the gay community and has been since she started playing in gay bars at the age of 12.) butch/femme

[1930s]-1) (adj) describing a relationship in which one person is femme and one is butch and describing the dynamic between them [Submitted by Rebecca Scott, A Brief Dictionary of Queer Slang and Culture]

2) the social structure prevalent in working-class lesbian bars up through the early 1970s. This structure was strictly enforced by peer pressure. One had to be either a butch or a femme, and butches only dated femmes and femmes only dated butches. There was a lot of backlash against this structure in the 1970s when lesbian feminism emerged, and for a long time butches and femmes were absolutely politically incorrect, and were likely to be shunned by the feminist lesbian community. Butch/femme is starting to make a comeback. In its new form, it is not rigidly enforced: women are butch or femme because it is their own personality, and nothing else. Butch-on-butche and femme-on-femme are no longer discriminated against. There is, however, still very strong anti-butche/femme sentiment. 2. castrated choir boy of of medieval Italy. It was believed a boy deprived of his testes would keep his soprano voice range. A male soprano or contralto singer whose unbroken voice had been preserved by castration performed before puberty so that the larynx would not develop. As a result his voice retained its high range, but because his lungs and chest matured they were able to produce sounds of great power. Although the range of the castrato was similar to that of the female soprano or contralto, the voice was stronger, often more voluptuous in tone, and capable of the utmost delicacy and technical brilliance. Castrati were in great demand as leading singers during the 17th and 18th centuries in opera houses throughout Europe, and most opera composers of the period wrote roles for them. Extraordinarily popular and highly paid, castrati were also employed in Italian church choirs, particularly in Rome. [Submitted from,Wei Lee, Dictionary of Gay Slan

ephebophilia:

1. one with a sexual attraction for teenage boys an erotic, as in contrast to term pedophilia refers to sex with prepubescent boys, under the age of consent. This fetish is a form of pedophilia, but the person is very specific in the size, shape, and amount of body hair, they go for boys that are pubescent, adolescent usually between the age of 12 and 16 that are young but sexually developed and that can orgasm, with semen. [note that boys in this age group, are of legal age of consent, in some parts of the world. In 1990, the Dutch Parliament approved legislation which reduced to 12 the age of consenting adolescents to legally have sex with one another. This is the lowest of all European countries. Canada: The age of consent for non-anal intercourse and for people in a position of non-authority over a person is 14. If there is anal intercourse involved, or if one is in a position of authority, then it is 18. Where two ages are shown this is either because a higher age applies where the older person is in a position of authority or influence over the younger.

2. boys in this age group 17 to 20, are of legal age of consent, in some parts of the world.

gonorrhoea:

[gahn-uh-ree'-uh] a specific infection caused by the bacterium *Neisseria gonorrhoeae*, commonly called gonococcus. It is one of the most common sexually transmitted diseases. The bacterium can primarily infect only certain parts of the body: the urethra, uterine cervix, rectum, throat, and eyes. The vast majority of cases are acquired by sexual contact.

Initial symptoms of gonorrhoea appear about 2 to 10 days after infection, although 10 percent of men and as many as 80 percent of women show no symptoms at all. The urethra is the site most infected in men and symptoms include burning urination and a penile

discharge. In women, gonorrhea most often attacks the reproductive tract but can also infect the urethra, rectum, throat, and eyes. Symptoms may include burning urination and a vaginal discharge. Infections in the throat or rectum almost never produce symptoms, and infection of the eyes results in pain, redness, and discharge.

If the infection is untreated in women, it can lead to pelvic inflammatory disease, and subsequently some of these women have difficulty becoming pregnant. The disease may result in infection of the joints (arthritis). During birth, babies may contract gonococcal eye disease from an infected mother. Silver nitrate drops placed into the eyes of newborns kill the gonococcus if present. Antibiotics given to both partners have traditionally been the preferred treatment for gonorrhea. However, recent studies have found that penicillin- and tetracycline-resistant gonorrhea increased alarmingly from 1988 to 1989. Treatment is moving toward the use of more expensive drugs, such as ceftriaxone, to treat the disease. New drugs and a possible vaccine are being developed to combat the disease. hypospadias:

a common congenital birth defect of the penis. The urethral opening (meatus) is at or just below the junction where the glans joins the shaft of the penis. It can, however, be as far back as the scrotum. In addition, boys with hypospadias are often missing the undersurface half of their foreskin so that forms a hood. There is often a bend (called chordee) in the erect penis. Hypospadias results from incomplete development of the urethra. It is sometimes inherited. Other than inherited cases, the cause is usually not known. Hypospadias may cause deviation of the urinary stream so that the boy is forced to sit to urinate. Additionally, sexual function may be hampered by the location of the urethral opening or by the bend in the penis. Surgery to correct the problem is usually successful. When possible, these operations are best accomplished between 6 and 18 months of age. Following surgery, most boys have normal function and a good cosmetic result. Long-term studies suggest that these boys do well emotionally as well. Fertility and potency would be expected to be normal after repair. See Columbia Medical School

methamphetimine:

also known as speed, this drug is a stimulant that is the amphetamine of choice for street use. At one time methamphetimine was prescribed for use as a diet pill, but it is no longer used therapeutically. Methamphetimine may be taken in a variety of ways: by mouth, injection, snorting, or smoking. Methamphetimine is easily synthesized, making its illicit manufacture for sale on the street relatively simple. Prior to the popularity of cocaine, methamphetimine was the most commonly used stimulant.

The effects and dangers of methamphetimine use are characteristic of other stimulants. However, chronic users of methamphetimine typically develop delusions of bugs crawling under their skin, leading the user to scratch the skin repeatedly and cause characteristic lesions. Another complication is the formation of local dilations of small arteries, resembling a naturally occurring illness called periarteritis nodosa, which can lead to kidney failure or brain hemorrhages. These two complications are rarely seen with other stimulants.

Like "crack" cocaine, crystals of the drug, called "ice", can be smoked, with an immediate effect similar to direct intravenous injection. The difference between "ice" and "crack" is that the methamphetimine high lasts for hours rather than the shorter cocaine high. "Ice" originated in Hawaii in 1987 but has since spread east across parts of the mainland United States. Although it was feared that "ice" might replace "crack," this has not yet happened. syphilis:

A sexually-transmitted disease. Caused by the spirochete *Treponema pallidum*. The spirochete cannot survive outside the body, so contracting the disease by other than intimate sexual contact is rare. The spirochete usually enters the body through invisible breaks in the skin or through intact mucous membranes lining the mouth, rectum, or genital tract. About three weeks later the person develops a sore, called a chancre, at the entry spot. Relatively painless, it is usually found around the genitalia but is sometimes seen on the lips or mouth, on the breasts, or around the rectum. Lymph nodes in the affected area often become enlarged. The chancre contains large numbers of spirochetes and is highly contagious. Even without treatment the chancre slowly heals in several weeks; the spirochetes, however, spread throughout the body, and six weeks to six months later the secondary stage of syphilis occurs, characterized mainly by fever, swollen glands, and a painless, non-itching rash over most of the body, including the genital tract, the mouth, and the palms and soles. Lesions also form in the mouth and around the vagina and anus, and these are highly contagious. Symptoms eventually resolve, and the disease enters its latent phase.

Two-thirds of syphilis patients have no further trouble with the disease and are no longer infectious. In some persons, involvement of the brain and spinal cord will occur from several months to years later, causing difficulties with thinking, sensation, and movement. Patients may suffer skin and bone damage or damage to the blood vessels around the heart, resulting in heart failure and sometimes requiring surgery. Some pregnant women transmit the organism to the fetus, resulting in miscarriage, stillbirth, or deformities that may be obvious at birth or may not appear until the child reaches puberty. Syphilis can be diagnosed with a blood test, and all stages of the disease can be cured with the appropriate antibiotic treatment. Damage that has already been done to affected tissues, however, cannot necessarily be repaired; early diagnosis and treatment are therefore extremely important. Patients who have been treated need to take blood tests periodically for two years thereafter. People with syphilis and other STDs have been found to be more susceptible to infection with the HIV virus

vile affections:

a Biblical term for homosexuality. The ultra-reactionary (and arguably the meanest-spirited people in the world) far-right wing of Christian gay bashers have read the Bible as condemning homosexuality. What are their arguments?

1. "Thou shalt not lie with mankind, as with womankind," says Lev. 18:22, for "it is abomination." Lying with womankind--that is, reproducing--was the first of God's laws

WWW

("Be fruitful and multiply" [Gen. 1:28]), and what probably made homosexuality among the Hebrews abominable was the fact that it was no way to go about reproducing. It was a waste of seed and contrary to the created order of things, God having made man "male and female" (Gen. 1:27)--"Adam and Eve," as someone has said, "not Adam and Steve"--that they might propagate as commanded.

2.The book of Leviticus later specifies the penalty for homosexual lovers: if a man lies "with mankind, as he lieth with a woman," both men "shall surely be put to death; their blood shall be upon them" (20:13).

3.In the New Testament, the Apostle Paul includes homosexuality under what he terms "vile affections": he deplores men "leaving the natural use of the woman," lusting instead for one another, "men with men working that which is unseemly" (Rom. 1:24-27). In the same passage Paul also attacks women lying with women, in the only reference to lesbian activity in the Bible.

The Bible's view of homosexuality thus appears to be unequivocally negative. Little wonder that there are no homosexual biblical characters--at least none who are "out." (On the apparent exception of the men of Sodom and Gibeah, see sodomy.) It has been long conjectured that David and King Saul's son Jonathan were more than good buddies. We are told that there was a "covenant" between them (1 Sam. 20:8), that Jonathan "delighted much in David" (19:2), that each loved the other "as he loved his own soul" (2 Sam. 18:1, 20:17), and that during their last meeting "they kissed one another, and wept one with the other" (20:41). On the death of his "brother" Jonathan, David laments, "Very pleasant hast thou been unto me: thy love to me was wonderful, passing the love of women" (2 Sam. 1:26). (Since David certainly did not pass up loving women, any sexual relationship with Jonathan would mean that David was bisexual. He may have married Michal for power, Abigail perhaps for her wealth, and as an old man he was impotent with Abishag, but the attraction of Bathsheba was hormonal.)

The Rev. John Williams, author of *Just As I Am: A Practical Guide to Being Out, Proud, and Christian*, is convinced that Jesus Christ was gay. The evidence Williams cites includes the fact that Jesus had no wife (highly unusual for a rabbi of his time), and had in his company the so-called beloved disciple, an unidentified follower in the Gospel of John whom "Jesus loved" and who "was leaning on Jesus' bosom" at the last supper. The sexual orientation of the Apostle Paul, a celibate who attacks homosexuality but suffers from some "thorn in the flesh" (2 Cor. 12:7), has also been a subject of speculation.

[See <http://www.hobrad.com/and.htm> for a further discussion. I should mention that the author concludes that the Bible forbids homosexual sex. I cannot find bona fide scholar who says the Bible condemns same-sex love.] [Submitted from, Wei Lee, Dictionary of Gay Slang]

Those convicted may be fined \$5,000 or imprisoned for up to 5 years, or both; the punishment may be doubled if the victim is a minor. There is no similar Act prohibiting the use of males for the same services. In 1908, Illinois became the first state to pass a pandering act, which changed the offense of importing, coercing, transporting, or enticing females across state or country lines for immoral purposes, procuring "white slave traffic", from disorderly conduct to

misdemeanor and greatly increased the penalty. (President Theodore Roosevelt considered the "white slave trade" the most "infamous and bestial, most cruel and degrading form of iniquity" known to his age.)
